Recommendation letter for Aya RAGAB for computer science position.:

I am writing this letter to recommend Mme Ragab for a computer science position. I had the pleasure of working closely with Mme Ragab as a MOSIG (Master of Science in Informatics at Grenoble) Master 2 student followed by a 5 months internship. I can confidently say that she possesses the qualities and skills necessary to work in the field of computer science (software engineer, process engineer, data analytics, ..), particularly in a remote work environment, as we already experienced the situation during her internship. She worked on the state of the art and prototyping of a tool to evaluate the environmental impact of business processes. She managed to propose pertinent extensions to an existing commercial tool in order to adapt to our requirements.

Indeed, Mme Ragab has demonstrated her ability to adapt and thrive in a remote work setting. Throughout our interactions, she has consistently met the project expectations, delivering quality results with independence and diligence. She properly documented her propositions in a detailed report without strong supervision. Mme Ragab's self-motivation and ability to work autonomously make her a good candidate for positions that require remote collaboration and self-management. She approaches tasks with a high level of seriousness and attention to detail.

In conclusion, I consider Mme Ragab can be a valuable asset to any team. I have no doubt that she will make significant contributions to any organization's success. Please feel free to contact me should you require any further information or clarification.

Sincerely,

Mario CORTES-CORNAX
